Technical assessment

<div align="center">How to start the application</div>

1. Download the executable JAR file(**demo-0.0.1-SNAPSHOT.jar)**.
2. Open a Command Line Interface and navigate to the directory where the JAR file is located using the "cd" command.
3. Run the JAR file by executing the following command: **java -jar demo-0.0.1-SNAPSHOT.jar** (this will start the Spring Boot application).
4. Access the application by opening a browser and navigating to **http://localhost:8081/index.html** . There you should see the web interface.

    If the default port 8081 is already in use, you can run the application on a different port by using the **--server.port** parameter: **java -jar demo-0.0.1-SNAPSHOT.jar --server.port=8081**
